Professional Summary

AI/ML Engineer experienced in developing Computer Vision and Agentic AI systems, with strong proficiency in Python, deep learning architectures, and end-to-end model deployment. Skilled in designing, training, and deploying scalable AI solutions using FastAPI and modern machine learning frameworks, focused on building impactful, real- world intelligent systems.

Skills

Programming: Python, C++
AI/ML: NumPy, Pandas, SciPy, Scikit-learn, PyTorch, Neural Networks, CNNs, Transformers, Computer Vision, NLP Model Training, Evaluation, Hyperparameter Tuning, Data Preprocessing, Feature Engineering.
Agentic AI: LLM agents, task automation, multi-agent systems, prompt engineering.
Backend/Deployment: FastAPI, REST APIs, Docker, Git, GitHub.
Frontend: Html/CSS, JavaScript, React
Databases: MySQL, PostgreSQL, SQLite, SQL Server
Core: Problem solving, communication, teamwork.

Experience

Software Engineer – Okta bytes | 8 months
FastAPI Backend Engineer
• Developed FastAPI backend services for AI applications and automation workflows
• Built APIs supporting ML model inference and data processing pipelines
• Collaborated with full-stack teams to deliver scalable software solutions.

Freelance & Project Experience | 1 year
Agentic AI Developer
Designed and deployed multi-agent AI systems for task automation and research.
Built APIs and integrations for LLM-powered applications.
Delivered end-to-end AI solutions for clients and personal projects.

Founder – Forensica AI

AI Startup Project
• Building an AI platform for detecting synthetic and manipulated media including deepfake videos, AI-generated images, synthetic voice, AI-written text, and fake news
• Designing computer vision and NLP models to analyze media authenticity using deep learning architectures
• Developing scalable AI APIs using Python, PyTorch, and FastAPI
• Working toward a web platform, mobile app, and browser extensions for real-time AI media verification

Founder – AdNova

AI Marketing Automation Platform
• Developing an AI-powered marketing agent for brand intelligence, automated marketing strategy, and social media content generation
• Building AI systems capable of market analysis, campaign generation, and automated content creation
• Designing backend services and AI workflows using Python, LLMs, and FastAPI
• Creating an AI-driven platform to assist businesses with marketing insights, branding, and automated social media management

Projects

Forensica AI: Deepfake detection system using computer vision and deep learning.
GitHub: https://github.com/basit-mehar/Forensica-AI
AdNova: AI marketing agent for automated brand intelligence and marketing strategy generation.
GitHub: https://github.com/basit-mehar/AdNova
AI Resume Analyzer: AI system for automated resume analysis and candidate evaluation.

GitHub: https://github.com/basit-mehar/AI-Resume-Analyzer
Autonomous Research Agent: Agentic AI system that performs web research and generates structured insights.
GitHub: https://github.com/basit-mehar/Autonomous-Research-Agent
Task Planning Multi-Agent System: Collaborative AI agents for automated task decomposition and execution.
GitHub: https://github.com/basit-mehar/Task-Planning-Multi-Agent-System
Agentic AI Task Execution API (FastAPI): Built an API that executes multi-step AI tasks using LLMs and other ML models, returning structured results in JSON.
GitHub: https://github.com/basit-mehar/Agentic-AI-Task-Execution-API

Education

BS Information Technology
Punjab University College of Information Technology (PUCIT) 2022 – 2026
